GWA MANUFACTURING AND DRIVE PRODUCTS NATIONAL FLEET UPFITTING FACILITY UPDATE

Since Fall 2019, the GWA team has been managing a building expansion project at the Windsor manufacturing and upfitting facility. With the intention to increase manufacturing space, and integrate Drive Products upfitting, this expansion aimed to double the existing footprint at that location with an additional 40,000 sq. ft.

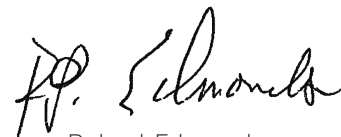

Today, I am excited to bring you a first glimpse into this newly expanded and fully integrated GWA Manufacturing and Drive Products National Fleet Upfitting Facility. GWA in Windsor now stands at a collective 80,000 sq. ft. of manufacturing, upfitting and office space. The home of GWA's signature line of van shelving for standard and custom van and truck builds as well as Voth Service Bodies, the team at GWA are excited to welcome Drive Products upfitting projects to this location.

As the building project reaches completion, we are looking forward to the addition of two more key pieces of equipment and will provide updates once they are up and running.

More additions still to come!

- LVD Laser Cutting system
- Jena Industries: Hybrid Powder Coating Paint System
