## Drive Products is Growing in Laval, QC

We are excited to announce the opening of our new Industrial Driveline facility in Laval. This new facility covers over 6000 sq. ft. of shop space, with additional office space and a viewing room that overlooks the shop floor. With the support of an overhead 5ton crane, our Industrial Driveline team is eager to work in this new facility.

Laval is familiar territory for us as the new Industrial Driveline location is next to our GW Anglin/Amtech Upfitting Facility.

The new Laval Driveline facility provides capacity to both repair and build new shafts with flange yoke diameters of over 550mm, with the capability to lift industrial driveshafts weighing up to 10,000lbs. These improvements mark Drive Products as one of North America's leading industrial drive shaft facilities.
