

July 11, 2022 - Press Release: Drive Products Tillsonburg – Expansion Project Update/Centralized Chassis Pool Stock Management

In July of 2020, Drive Products bought 25 acres of land adjacent to the Drive Products Manufacturing facility operations in Courtland, ON. This purchase coincided with long-term plans of increasing the operational synergy between its upfitting, manufacturing, and distribution divisions to improve its overall supply chain management. Subsequently began a two-year transition process where the Newmarket, Mississauga, and Tillsonburg upfitting operations shared the capacity of managing the chassis pool stock and related orders. A short-term solution to fulfill commitments and service truck dealer

partners. Simultaneously Drive Products began developing the 25 acres of land in Courtland, ON

alongside expansions projects of its manufacturing and upfitting facility.

Today, Drive Products is excited to announce that the development of this land is complete and features a compound with capacity for 1000 trucks secured via a gated entrance and fencing around the perimeter. In addition, Drive Products Tillsonburg will now have 17,500 sq. ft. of space dedicated to upfitting complete with new overhead cranes and paint booth. This marks the final stages of centralizing inventory of chassis pool stock trucks, truck equipment and manufactured products such as Voth Unibody, DEL Job Boss, and Kargo King Roll-Off systems in one place at Drive Products Tillsonburg. Beginning September 1st, 2022, the newly upgraded Drive Products Tillsonburg will now be the central hub for the upfit of

chassis pool stock orders for the Ontario market. The Newmarket upfitting operations and order book commitments will be integrated within Drive Products Mississauga and Drive Products Tillsonburg.
